Rx Drugs – Too Little, Too Much or Just Right?

This former global pharmaceutical senior exec says that one drug does NOT treat all and one dose does NOT treat all.

Did you know that most prescription drugs have a Goldilocks Effect? Elizabeth Reed Aden holds a PhD in biomedical anthropology and did her post-doctoral studies in Human Genetics at Stanford. As Senior Vice President of Global Pharmaceutical Strategy at Roche headquarters in Basel, she participated all product-based decisions. Her responsibilities spanned pricing, reimbursement, new product planning, acquisitions and business planning. She has held numerous C-level positions spanning many different technologies and co-founded biotech companies. Presently sits on a couple of Boards of Directors, including a gene therapy company developing a novel approach for Type 1 Diabetes.

Show and Story Ideas:

- ***The Goldilocks Effect in Prescription Drugs***
6 facts you wish you didn't know...and need to know to make things "just right"
- ***Reducing Runaway Healthcare Costs – 4 Breakthrough Advances:***
Big Data, Artificial Intelligence, DNA & Wearables
- ***The Genie in Your Genome—5 Steps to Know Your Genomic Data.***
Providing the tools to explore and understand your genes and potential drug interactions.
- ***Food & The Goldilocks Effect – Unequal Benefits of Healthy Foods***
Many foods and vitamins, like drugs, are processed by the liver with variable benefits.
- ***Anti-depressants and Statins: It's a Long and Winding Road to the Right Drug***
Genetics may get the right drug...first try
- ***Benefits of genetic testing for disease susceptibilities***
If You Know It, You Can Probably Do Something About It
- ***New Opportunities in Neurodegenerative & Cardiovascular Diseases***
Patient segmentation & repurposed medicines – a step towards a better tomorrow?
